PROFILE

Geospatial Science student passionate about understanding the world through maps, data, and technology. Skilled in GIS, remote sensing, spatial analysis, Google Earth Engine, and geospatial programming, with experience turning spatial datasets into clear and interactive visual insights. I enjoy learning new technologies, solving problems creatively, and communicating technical results in a simple and meaningful way. My interests lie at the intersection of GIS, remote sensing, spatial intelligence, and emerging technologies, with a focus on transforming geospatial data into meaningful insights and practical solutions.

EDUCATION

2025–2027	Master's of Science in Geoinformatics (Pursuing) Bharati Vidyapeeth Institute of Environment Education and Research, Pune.
2022–2025	Bachelor's of Science in Botany Ramnarain Ruia College, Mumbai.

EXPERIENCE

Conservation Action Trust **May 2025**
Conducted mangrove cover mapping across MMR and land cover change detection for the Dahanu region using Sentinel-2/Landsat imagery in Google Earth Engine and ArcGIS Pro. Georeferenced CZMP maps and analysed compensatory mangrove plantation compliance across 9 coastal sites.

India Space Lab **May 2025**
Completed technical training in drone technology, CanSat/CubeSat systems, remote sensing/GIS and rocketry. Designed a GCS for CanSat, tuned a PID controller for autonomous drone/boat navigation and evaluated rocket fin aerodynamics using SimScale.

MAJOR PROJECTS

Global Earthquake Explorer *Python, GIS, WebGIS*

Analysed global earthquake events in Google Colab and performed spatial, magnitude, temporal, and hotspot analysis. Developed an interactive WebGIS dashboard using VS Code and deployed it online through GitHub Pages.

LULC Change Detection – Hyderabad *Google Earth Engine, Sentinel-2, WebGIS*

Developed an interactive webpage to visualize and analyse LULC changes using Sentinel-2 imagery. Applied remote sensing and change-detection techniques to assess urbanization, vegetation and water-body changes.

MODIS Vegetation Dynamics of India *MODIS, GIS, Remote Sensing*

Conducted state-wise temporal analysis of vegetation cover across India from 2001–2023 using MODIS MOD44B data in Google Colab. Developed an interactive webpage dashboard to visualize vegetation dynamics and compare changes across states using VS Code and deployed it online through GitHub Pages.

Bharati Vidyapeeth Campus 3D Geospatial Dashboard *ArcGIS, 3D GIS*

Designed an interactive 3D GIS dashboard visualizing campus infrastructure and facilities to support smart campus planning and geospatial decision-making.

Geospatial Assessment of Heat Flow and Land Suitability – NH-48 Transit Corridor *Remote Sensing, GIS*

Analysed NH-48 transit corridor heat flow and land suitability using multi-temporal remote sensing data and modelled 2035 green corridor reforestation priorities.

CERTIFICATIONS

Kaggle – Introduction to Machine Learning (2026)
SimpliLearn – Introduction to HTML (2026)
SimpliLearn – Intermediate Machine Learning

Kaggle – Intermediate Machine Learning (2026)
SWAYAM NPTEL – Research Methodology (2026)
SimpliLearn – Scientific Writing

SKILLS

Programming:	Python, Java, JavaScript, HTML
Geospatial Tools:	ArcGIS Pro, ArcGIS Online, QGIS, Google Earth Engine, Git, VS Code
Remote Sensing:	Sentinel-1, Sentinel-2, Landsat, MODIS, NDVI, NDWI, SAVI, NDMI
Soft Skills:	Self-motivated, Teamwork, Quick Learner, Communication
